

Digital Campus, Campus of the Future: Why PTNs Must "Move On" to Srikandi App?

By Stecho Rosadi May 03, 2026 16 views Source: <https://arsip.terakomputer.com/en/articles/2026-05-03-kampus-digital-kampus-masa-depan-mengapa-ptn-wajib-move-on-ke-aplikasi-srikandi>

The campus world is a storehouse of innovation. However, ironically, the administration is often trapped in piles of paper piled up on bureaucratic desks. The good news is, that era is coming to an end. Welcome to the Srikandi era, an application that is ready to change the face of administrative governance in State Universities (PTN) to be leaner, smarter, and more transparent.

For a public university, Srikandi is not just a letter-sending app, but a bridge to becoming a world-class university.

Why Is Srikandi a "Game Changer" on Campus?

The implementation of Srikandi within public universities brings a breath of fresh air that transforms the way faculty, staff, and even the administration work:

1. Bureaucracy Is No Longer a Nightmare

In the past, matters like curriculum approvals or research assignment letters had to “travel” from one faculty to the rector’s office, taking days. With Srikandi, documents flow digitally in seconds. The rector can approve them while attending an international conference, directly from *a smartphone*.

2. The Accreditation

Lifesaver One of the crucial points in accreditation is document traceability. Srikandi maintains a neat digital trail. There’s no more drama of “missing documents” when auditors arrive. Everything is securely stored in the national data center, ready to be downloaded whenever needed.

3. Green Campus

Implementing Srikandi is a concrete action supporting sustainability. Thousands of reams of paper can be saved each year. Imagine how many trees would be saved if all public universities in Indonesia stopped excessively printing official memos and physical invitation letters.

4. Security and Legal

Validity With the integration of Electronic Signatures (TTE) from BSSN, the authenticity of campus documents is better guaranteed. Forging signatures on official decisions or diplomas becomes much more difficult because every document has a unique verification code.

Unique Challenges in the Academic Environment

Of course, the journey toward full digitization at public universities is not always smooth:

- **Senior Digital Literacy:** Convincing senior faculty members who have been comfortable with physical systems for decades requires a persuasive approach and patient training.
- **Integration of Internal Systems:** Many public universities already have their own management information systems (MIS). The challenge is how to align Srikandi so it can “interoperate” with existing systems without causing data confusion.

Srikandi: Preserving History for Future Generations

A university’s history is recorded in its archives. If those archives are damaged or lost due to poor management, part of the campus’s identity is lost. Srikandi ensures that

today's critical decisions—from research to program development—are recorded according to enduring national standards.

It is time for the academic community to stop being “paper custodians” and start becoming “knowledge managers.” Srikandi is our first step.
